

FOR IMMEDIATE RELEASE

Going Virtual with WAN Optimization Software

Webcast Title: Going Virtual with WAN Optimization Software

Date: Wednesday, August 11, 2010

Time: 1:00 p.m. EDT

BURLINGTON, Mass. — July 20, 2010 — [Certeon](#), the leading provider of virtualized software-based WAN optimization and application acceleration, today announced a webcast that explores how virtual WAN optimization software can boost application performance for remote users accessing applications on virtualized servers over the WAN.

The Certeon webcast — [Going Virtual with WAN Optimization Software](#) examines how virtual WAN optimization software goes hand-in-hand with virtualizing servers and desktops in the data center and at branch offices. Learn about the many benefits of virtual WAN optimization software and what is required to deploy a high performance virtualized infrastructures that supports remote access to virtual resources and applications. The registration page can be found at [Network World](#).

What you will learn from this webcast:

- The differences among various virtualized network components
- The importance of WAN optimization in a virtualized infrastructure
- How WAN optimization virtual appliance software works
- The compelling benefits behind going virtual with WAN optimization software

Featured Speakers:

Dr. Jim Metzler is the founder of Ashton, Metzler & Associates and an industry authority on application delivery.

Shawn Cooney is the co-founder and research director of Certeon.
