Certeon and Allin Corporation Sign Systems Integration Partnership to Deliver High Performance Microsoft SharePoint Installations

-- Allin to Use Certeon's S-Series Application Acceleration Appliances in its SharePoint Health Check Assessments --

View the SharePoint® Health Check — Optimizing Your Application Environment Business Solution: [HTML](#) | [PDF](#)

BURLINGTON, Mass. – July 17, 2006 – Certeon, the only vendor to provide secure application acceleration from desktop to the data center, today announced that Allin Corporation has joined the Certeon Partner Acceleration Program as a Systems Integration partner. As part of Allin's Health Check Assessments of distributed Microsoft® SharePoint® environments, it will use Certeon's Secure Acceleration Technology™ and S-Series™ appliances to demonstrate the success and increased ROI of its customers' SharePoint deployments. Certeon's S-Series, with its embedded Application Acceleration Blueprints™ for Microsoft SharePoint Products and Technologies, securely accelerates distributed SharePoint application environments by decreasing response times and increasing scalability over a WAN.

With more than 70 million seats sold to date, SharePoint has become a critical collaboration tool for today's global enterprises. Allin currently provides its SMB and Fortune 500 customers with a comprehensive health check to ensure that they are using SharePoint to its fullest potential. By using Certeon's S-Series with embedded Application Acceleration Blueprints for Microsoft SharePoint, Allin can now resolve any technology challenges branch office workers experience accessing SharePoint applications over a WAN, such as the effects of low bandwidth, high latency, packet loss, and contention. The company reaps the benefits of optimizing SharePoint application access performance from the increased ROI on its SharePoint investment and the end-users see the added value in decreased file and data download times, more effective retrieval of data, and speedier international links. Ultimately, these benefits will drive SharePoint adoption and facilitate deployment.

The Allin SharePoint Health Check is specifically designed to take the pulse of a company's

collaboration system. It then generates a roadmap for managing content, pinpoints where overall information access and application response times can improve, aids in compliance with company policies, mitigates security risks and offers prescriptive guidance.

“Our SharePoint Health Checks revealed the delays in application response times for branch office employees as a result of accessing SharePoint applications over a WAN. These delays were a key roadblock to our customers’ SharePoint adoptions,” said Karl Kuhnhausen, collaboration solutions director, Allin Corporation. “Certeon improves application response times and end-user experiences, and as a Certeon partner, Allin is now able to meet this critical customer need. Together, Allin and Certeon are helping enterprises maximize their SharePoint deployment investments.”

Certeon’s unique Application Acceleration Blueprints for SharePoint have a deep understanding of SharePoint Products and Technologies at the application level, enabling unmatched secure application acceleration over a WAN. Additionally, Certeon’s Secure Acceleration Technology combats a variety of network traffic and latency issues for optimal security, speed and scalability without increasing existing bandwidth.

“Working together, Certeon and Allin can assist enterprises in deploying and managing a secure SharePoint environment for greater user productivity,” said John Lloyd, vice president, business development, Certeon. “In addition to increased performance, reliability and scalability, Allin customers will also see a significant cost savings as the result of this partnership.”

The Certeon Partner Acceleration Program is aimed at solving the problems of F2000 global enterprises as they deliver application services to professional branch office workers. Companies with unique customer value that are interested in applying for the Certeon Partner Acceleration Program are encouraged to visit www.certeon.com/html/partners.html or call 781-425-5200.

About Allin Corporation

Allin Corporation is a leading provider of solutions-oriented application development and technology infrastructure consulting and systems integration services. Allin specializes in Microsoft-based technologies and interactive media with operations centered on four practice areas: Technology Infrastructure, Collaborative Solutions, Business Process and Interactive Media. Allin is also one of the few Service Provider Partners for Microsoft’s Unified Communications program. Allin was chosen to be included in the program because of the solutions that they offer around Real Time Collaboration. Allin leverages its experience in these areas to work with clients through a disciplined project delivery framework to ensure that solutions are delivered on time and on budget. Allin delivers these services through the trade names Allin Consulting, Allin Interactive and CodeLab Technology Group. The Company maintains offices in Pittsburgh, Pennsylvania; Ft. Lauderdale, Florida; Wakefield, Massachusetts; and San Jose and Walnut Creek, California. For additional information about Allin, visit the Company’s Internet sites on the World Wide Web at <http://www.allin.com> and <http://codelabtech.com>.

About Certeon

Certeon provides the industry's first solution for Secure Application Networking™ to deliver secure application acceleration from the desktop to the data center. Based on Certeon's patent-pending Secure Acceleration Technology, the company's S-Series appliances with embedded Application Acceleration Blueprints is the only solution on the market which speeds mission-critical applications and minimizes network traffic, while maintaining end-to-end security. Founded in 2003, Certeon is a private company funded by Globespan Capital Partners and Sigma Partners. The Company is headquartered in Burlington, Mass. For more information, visit www.certeon.com or call 781-425-5200.
