Certeon and Magenic Partner to Maximize Application Performance for Global Enterprises

-- Magenic to Use Certeon's S-Series Application Acceleration Appliances to Help Customers Reduce Costs and Increase Performance --

BURLINGTON, Mass. – August 7, 2006 – Certeon, the only vendor to provide secure application acceleration from desktop to the data center, today announced that Magenic has joined the Certeon Partner Acceleration Program as a Systems Integration partner. Magenic, a premier software development and consulting company focused on Microsoft® technologies, will use Certeon's S-Series™ Application Acceleration Appliances to help its customers improve application response time over the WAN. Certeon's technology increases the speed, scalability, and security of distributed all WAN traffic but is optimized to accelerate applications such as Microsoft Office™ System™ and SharePoint® Products and Technologies, ensuring a responsive and secure experience for end-users located in branch offices.

"Our customers' demand for Microsoft applications and collaboration portals continues to rise as enterprises expand globally. This market growth trend is increasing the need for sharing vital corporate data between employees located across various geographic locations," states Shari Brandt, national director, marketing and alliances at Magenic. "Certeon is filling a core requirement for our customers, helping us to enable the faster deployment and adoption of our offering of Microsoft solutions and most importantly, helping us to offer our customers optimum performance for their worldwide Office and SharePoint environments."

As part of the partnership, Magenic will use Certeon's S-Series, with its embedded Microsoft Application Acceleration Blueprints™ to enhance Magenic's SharePoint Portal Assessment services for European and U.S.-based customers. The Assessment evaluates how an organization benefits by using a portal to organize and share documents efficiently and demonstrates the impact of SharePoint Products and Technologies on an organization's

efficiency. The resulting portal solution delivers significantly faster information retrieval, and measurably greater user productivity along with an improved application experience for distributed Microsoft Office and SharePoint environments. And by including the Certeon S-Series as part of an overall distributed application implementation, customers will see a more than 1000 percent reduction in application response times.

“Magenic is an award-winning leader in the Microsoft software development and consulting industry and Certeon is pleased to be working with Magenic to enhance the solutions we can bring to our joint customers,” said John Lloyd, vice president, business development at Certeon. “Magenic and Certeon provide the optimum solution for efficient enterprise information access and retrieval, while lowering network and operational costs.”

About Magenic

Magenic is a premier Microsoft-focused software application development firm whose core competency is planning, designing, building and supporting those applications throughout their entire lifecycle—from concept to retirement. The company’s team of expert developers and consultants helps a wide variety of clients — ranging from ISVs to Fortune 1,000 companies — develop Microsoft-based applications that meet their technical and business objectives. A Microsoft Gold Certified Partner, Magenic uses its proven Foundation™ methodology and tools — Magenic Foundation Accelerators™, Magenic Foundation Process™ and Magenic Foundation Automated Build™—to ensure project success and provide long-term solutions that adapt to customers’ dynamic needs. Magenic is a recognized authority in .NET technology, business intelligence, enterprise architecture, content management, Microsoft Business Solutions application development and distributed systems integration. Magenic serves clients around the world through its regional offices in Atlanta, Boston, Chicago, Minneapolis and San Francisco. More information about the company and its services is available at www.magenic.com.

About Certeon

Certeon S-Series Application Acceleration Appliances provide the industry’s first solution for Secure Application Networking™ to deliver secure application acceleration from the desktop to the data center. Based on Certeon’s patent-pending Secure Acceleration Technology™, the company’s S-Series appliances with embedded Application Acceleration Blueprints is the only solution on the market which accelerates all WAN traffic, speeds mission-critical applications and minimizes network traffic, while maintaining end-to-end security. Founded in 2003, Certeon is a private company funded by Globespan Capital Partners and Sigma Partners. The Company is headquartered in Burlington, Mass. For more information, visit www.certeon.com or call 781-425-5200.
