Certeon Partners with BRT to Turbo-Charge ECM Deployments

-- BRT's Testing of Certeon's S-Series Appliance Reveals a Greater Than 90 Percent Improvement of ECM Application Response Time --

BURLINGTON, Mass. – October 9, 2007 – [Certeon](#), the industry's only vendor to securely accelerate mission-critical applications effectively, today announces the addition of [BRT](#) to its [Partner Acceleration Program](#) as a systems integrator. BRT's customers can now leverage Certeon's S-Series™ Appliance to speed the page rendering, file download and file upload times typically hindered by the limitations of the WAN in enterprise content management (ECM) deployments.

When tested using real-world deployment scenarios, BRT recorded a greater than 90 percent improvement of EMC® Documentum® file upload and file download times utilizing Certeon's S-Series Appliance. To achieve this level of improvement, Certeon's S-Series leverages its embedded Application Acceleration Blueprint™ for EMC Documentum and eRoom. The Application Acceleration Blueprint relies on built-in knowledge of Documentum and eRoom application objects to turbo charge response times across the WAN.

"EMC recommended that we investigate Certeon's offering, because we are regularly involved in enterprise systems performance and architecture consultations," said Andy Shallman, vice president of BRT's enterprise content and Web solutions practice. "The Certeon S-Series appliances greatly improved performance in our practical use case scenarios. Certeon's products will be of interest to our current and prospective clients, and is a valuable compliment to our ECM consulting business."

BRT is a premier integrator and reseller of ECM and collaborative solutions, specializing in Business Process Engineering to improve how businesses compete in the market while also

providing solutions for corporate governance and regulatory compliance. BRT's customers, including large insurance and healthcare organizations, as well as multi-national retail and manufacturing enterprises can now realize the efficiencies of an ECM deployment utilizing Certeon's solution to speed information delivery across the WAN.

Certeon's S-Series appliances provide a cost-effective, no-risk option to address the real-world problem of collecting, managing and discovering important business documents from multiple remote locations at speeds found on the Internet. The Certeon solution is deployable centrally without the need for network support professionals to understand the detailed mechanics of ECM solutions. This makes its inclusion, even in a hosted applications environment, very practical while the total cost of deploying a distributed content solution is reduced.

"Unlike typical vendors in our space, our S-Series Appliances are designed specifically to accelerate applications over the WAN for the dynamic enterprise content management market" said Peter Dougherty, CEO and president of Certeon. "We are excited at the prospect of speeding the response times of the ECM deployments of BRT's customers."

Certeon offers three models of its Application Acceleration Appliances: the S-1000, S-2000 and S-3000, supporting small branch offices, regional offices and large data centers, respectively. In addition to the EMC Documentum and eRoom Blueprints, Certeon has Application Acceleration Blueprints for Microsoft® SharePoint®, 2007 Microsoft Office™, MOSS 2007, Microsoft File Services (CIFS) and Office 2003, as well as UGS Solid Edge™. Certeon's S-Series accelerates all WAN traffic, including encrypted SSL traffic, to ensure end-to-end data security and integrity.

About Certeon

Certeon's S-Series Application Acceleration Appliances provide the industry's only solution with Application Intelligent Networking to deliver application acceleration, security and scalability from the desktop to the data center. Certeon's patent-pending S-Series appliances accelerate all WAN traffic and are optimized for distributed content delivery and collaboration applications such as: enterprise content management, work flow and process management, Web portals and search. S-Series appliances are the only solution to securely accelerate encrypted traffic (SSL) with the same performance improvements as unencrypted traffic. The appliances minimize network traffic to significantly improve application response times, while maintaining end-to-end security. Founded in 2003, Certeon is a private company, headquartered in Burlington, Massachusetts with European offices in The Netherlands. For more information, visit www.certeon.com or call 781-425-5200.

About BRT, Inc.

BRT is an innovative consulting firm, specializing in integrated Enterprise Content, Imaging, Collaborative and Business Process Management solutions. We are established in multiple industries including Automotive, Insurance, Healthcare and Life Sciences. BRT has over a decade of experience delivering highly successful, web-based content solutions to clients of all sizes.

BRT Targeted Solutions include:

- Accounts Payable Processing

- Document Capture and Advanced Imaging
- Corporate Tax Compliance and Audit Support
- Integrated Content Management Solutions on EMC® and Microsoft® Platforms

BRT supports clients nationally and is headquartered in Novi, Michigan. For more information, visit www.brtsi.com or call 248-324-9775.
